Authorized to work in the U.S. — no sponsorship required

PROFESSIONAL SUMMARY

Full-stack Software Engineer with 6+ years shipping production web applications in **React**, **TypeScript**, and **Node.js** — building both the interface and the **REST** services and **SQL** data layer behind it. Owns features end to end: turns ambiguous requirements into a technical approach, builds and tests the implementation, and drives it through code review, QA, and release rather than handing off at merge. Proven under fixed-date releases and tight deadlines, coordinating daily with QA, backend, DevOps, and product teams.

TECHNICAL SKILLS

Frontend: **React**, **Next.js**, **TypeScript**, **JavaScript (ES6+)**, **Redux Toolkit**, **React Query**, **React Hook Form**, **HTML5**, **CSS3/SCSS**, responsive UI, accessibility (**WCAG/ARIA**), performance optimization

Backend & Data: **Node.js**, **Express.js**, **REST APIs**, **JWT** authentication, **JSON/XML** handling, **PostgreSQL**, **SQL**, schema design, migrations, query optimization, **NoSQL** and **microservices** concepts

Testing & Quality: **Jest**, **React Testing Library**, **Cypress**, **Playwright**, unit / integration / end-to-end testing, debugging, defect reproduction, release validation

DevOps & Practices: **Docker**, **GitHub Actions**, **CI/CD**, **Git**, **Vite**, **Webpack**, **AWS** and **Kubernetes** fundamentals, **Agile/Scrum**, code review, **OOP**, design patterns, component architecture

PROFESSIONAL EXPERIENCE

Software Engineer | CMC Global — Vietnam

Dec 2022 – Jun 2026

- Owned feature delivery end to end for **React** and **TypeScript** web applications — clarifying ambiguous requirements with product owners, designing the implementation approach, and driving it through testing, code review, and production release.
- Built API-connected dashboards, multi-step forms, and authentication flows with **React**, **Redux Toolkit**, **React Query**, and **React Hook Form**, including validation, error states, and responsive layouts.
- Developed and integrated **REST** services in **Node.js** / **Express**, handling **JSON** and **XML** payloads, data mapping, response parsing, and **JWT** authentication — moving between frontend and backend as delivery demanded rather than waiting on another team.
- Wrote unit and integration tests with **Jest** and **React Testing Library** and end-to-end coverage with **Cypress** and **Playwright**, reproducing defects with precise repro steps and verifying fixes before release.
- Optimized web performance through component memoization, code splitting, bundle analysis, and query batching, profiling with **Chrome DevTools** and **Lighthouse** to meet responsiveness targets across browsers and devices.
- Built and maintained **CI/CD** pipelines with **GitHub Actions** and **Docker**, standardizing lint, test, and build gates so no unverified change reached a release branch.
- Delivered consistently against fixed-date releases under tight deadlines, coordinating daily with QA, backend, DevOps, and product stakeholders across time zones, and regularly taking the highest-risk items in the sprint.

Full Stack Developer | NFQ Asia — Vietnam

Jun 2019 – Nov 2022

- Developed full-stack features for international client products using **JavaScript**, **TypeScript**, **React**, **CSS3/SCSS**, and **REST API** integrations, from requirement through production.
- Built reusable component libraries, data tables, and dashboards adopted across multiple product modules, cutting duplicated UI code and speeding delivery of new screens.
- Supported **REST APIs**, **JSON** payloads, data validation, client-server error handling, and authentication flows for business-critical workflows, partnering with backend engineers and QA to reproduce defects, verify fixes, and expand regression coverage before release.
- Raised code quality through code review, refactoring, and performance profiling; worked in **Agile/Scrum** sprints with planning, estimation, and demos delivered in English to international client stakeholders.

PROJECTS

JobIntel — AI Job Intelligence Platform [Live app](#) · [GitHub](#)

2026

- Built a full-stack platform that crawls career pages, extracts structured job data with LLMs, and scores postings against an uploaded résumé — **React**, **Next.js**, **TypeScript**, **Node.js**, **Express**, **PostgreSQL**.
- Designed a provider-agnostic AI layer over the **Anthropic**, **Google Gemini**, and **Groq** SDKs with automatic failover, so a rate limit or outage on one provider degrades the crawl instead of stopping it.
- Implemented **JWT** authentication, PDF résumé parsing with **multer**, and six sequential **SQL** migrations; deployed with **GitHub Actions**.

EDUCATION & CERTIFICATIONS

B.E. Information Systems | University of Information Technology (UIT – VNU-HCM), Vietnam

2019

U.S. credential evaluation completed by **ECE** · **AWS Certified Solutions Architect – Associate** (in progress)
